(ALL BATCHES)

DATE: 20.09.2018 MAXIMUM MARKS: 100 TIMING: 3¼Hours

PAPER 3 : COST ACCOUNTING

Answer to questions are to be given only in English except in the case of candidates who have opted for Hindi Medium. If a candidate who has not opted for Hindi Medium. His/her answer in Hindi will not be valued.

Question No. 1 is compulsory.

Candidates are also required to answer any Four questions from the remaining Five Questions.

In case, any candidate answers extra question(s)/sub-question(s) over and above the required number, then only the requisite number of questions first answered in the answer book shall be valued and subsequent extra question(s) answered shall be ignored.

Wherever necessary, suitable assumptions may be made and disclosed by way of note.

Answer: 1

(a) (i) Efficiency Ratio $= \frac{\text{Actual Prodcution in terms of standard hours}}{\text{Actual hours worked}} \times 100$ } **1M**

$= \frac{750 \text{ units} \times 10 \text{ hours}}{6,000} \times 100 = 125\%$ } **½M**

(ii) Activity ratio $= \frac{\text{Actual Production in terms of standard hours}}{\text{Budgeted production in terms of standard hours}} \times 100$ } **1M**

$= \frac{7,500}{880 \times 10} \times 100 = 85.23\%$ } **½M**

(iii) Capacity Ratio $= \frac{\text{Actual hours worked}}{\text{Maximum hours in a budget period}} \times 100$ } **1M**

$= \frac{6,000}{8,800} \times 100 = 68.19\%$ } **½M**

Activity ratio = Efficiency Ratio × Capacity Ratio

Or, 85.23 = 125% × 68.19 } **½M**

(b) Working Notes:

1. Depreciation per annum $= \frac{\text{Purchase price} - \text{Scrap value}}{\text{Estimated life}}$

$= \frac{\text{Rs. } 4,00,000 - \text{Rs. } 10,000}{5 \text{ years}} = \text{Rs. } 78,000$ } **½M**

2. Total distance travelled by mini-bus in 25 days:
   = Length of the route (two -sides) × No. of trips per day × No. of days
   = 60 km × 6 trips × 25 days = 9,000 km } **½M**

3. Total Passenger-Km:
   =Total distance travelled by mini-bus in 25 days × No. of seats
   = 9,000 km × 20 seats = 1,80,000 passenger-km } **½M**

Statement suggesting fare per passenger-km

Particulars	Costperannum Rs.	Costpermonth Rs.
Fixed expenses:		
Insurance	15,000	
Garage rent	9,000	
Road tax	3,000	
Administrative charges	5,000	
Depreciation	78,000	
Interest on loan	10,000	
	1,20,000	10,000
Running expenses:		
Repair and maintenance	15,000	1,250
Replacement of tyre-tube	3,600	300
Diesel and oil cost (9,000 km × Rs. 5)	-	45,000
Driver and conductor's salary	-	5,000
Total cost (per month)		61,550.00
Add: Profit 20% of total revenue cost or 25% of total cost		15,387.50
Total revenue		76,937.50

2M

Rate per passenger-km Rs. 76,937.50/1,80,000 passenger km = 0.42743 i.e., = 0.43 i.e., 43 paise

1½M

(c) (1) Comparative Profitability Statements

Particulars	Process- A (Rs.)	Process- B (Rs.)
Selling Price per unit	20.00	20.00
Less: Variable Cost per unit	12.00	14.00
Contribution per unit	8.00	6.00
Total Contribution	32,00,000 (Rs. 8 ×4,00,000)	24,00,000 (Rs. 6 ×4,00,000)
Less: Total fixed costs	30,00,000	21,00,000
Profit	2,00,000	3,00,000
*Capacity (units)	4,30,000	5,00,000
Total Contribution at full capacity	34,40,000 (Rs. 8 ×4,30,000)	30,00,000 (Rs. 6 ×5,00,000)
Fixed Cost	30,00,000	21,00,000
Profit	4,40,000	9,00,000

3M

Process- B should be chosen as it gives more profit as compared to Process-A.

(2)

Particulars	Process- A (Rs.)	Process- B (Rs.)
*Capacity (units)	6,00,000	5,00,000
Total contribution	48,00,000 (Rs. 8 ×6,00,000)	30,00,000 (Rs. 6 ×5,00,000)
Fixed Cost	30,00,000	21,00,000
Profit	18,00,000	9,00,000

2M

If the capacity of the Process A and B is 6,00,000 units and 5,00,000 units respectively then Process-A is giving double profit than Process C. Thus Process A be chosen.

*Note: It is assumed that capacity produced equals sales

(d) Statement of cost per batch and perorder

No. of batch = 600 units ÷ 50 units = 12 batches

	Particulars	Cost perbatch (Rs.)	TotalCost (Rs.)	
	Direct Material Cost	5,000.00	60,000	
	Direct Wages	500.00	6,000	
	Oven set-up cost	750.00	9,000	
	Add: Production Overheads (20% of Direct wages)	100.00	1,200	
	Total Production cost	6,350.00	76,200	
	Add: S&D and Administration overheads (10% of Total production cost)	635.00	7,620	
	Total Cost	6,985.00	83,820	
	Add: Profit (1/3rd of total cost)	2,328.33	27,940	
(i)	**Sales price**	**1M}9,313.33**	**1,11,760**	**{1M**
	No. of units in batch	50 units		
(ii)	**Cost per unit** (Rs.6,985 ÷ 50 units)	**139.70**		
	Selling price per unit (9,313.33 ÷ 50 units)	**1M} 186.27**		

(iii) Iftheorderisfor605cakes,thensellingpricepercakewouldbeasbelow:

Particulars	Total Cost (Rs.)
Direct Material Cost	60,500
Direct Wages	6,050
Oven set-up cost	9,750
Add: Production Overheads (20% of Direct wages)	1,210
Total Production cost	77,510

2M

Add: S&D and Administration overheads (10% of Total production cost)	7,751
Total Cost	85,261
Add: Profit (1/3rd of total cost)	28,420
Sales price	**1,13,681**
No. of units	605 units
Selling price per unit (Rs.1,13,681 ÷ 605 units)	**187.90**

Answer: 2

(a) Calculation of cost and amount chargeable by the Contractor

Particulars	**Veg.**	**Non-Veg**
No of Meals per Day	180	120
No of Meals per Month	180×25 = 4,500	120×25 = 3,000
Variable Cost:	Rs.	Rs.
Cereals	8 per plate	-
Veg items	5 per plate	-
Cooking Oil	4 per plate	-
Spices	1 per plate	-
Total Variable Cost	18 × 7500 (4500 + 3000)	1,35,000
Additional variable cost of Non-veg meal	15 × 3000	45,000
Total Variable Cost		1,80,000
Fixed Cost:		
Salary of Cook	13,000	
Salary of Helpers (7,000 × 3)	21,000	
Fuel	2,000	36,000
Total Cost		2,16,000
Profit 20% on his takings or 25% on Cost		54,000
Total amounts chargeable by the Contractor		2,70,000

5M

(i) No. of Non-Veg Meals 3,000

Equivalent No. of Veg Meals = 3,000 × 1.5 = 4,500

No. of Non Veg Meals = 4,500

Total 9,000

Price per Veg Meal = $\frac{Rs.2,70,000}{Rs.9,000}$ = Rs. 30

Price per Non Veg. Meal = Rs. 30 × 1.5 = Rs. 45/-

2.5M

(ii) Price per meal when a worker will have to pay

Veg meal Rs. 30 – Subsidy (60% of Rs. 30)

= Rs. 30 – Rs. 27 = Rs. 12/-

Non-Veg Meal Rs. 45 – Subsidy (60% of Rs. 45)

Rs. 45 – Rs. 27 = Rs. 18/-

2.5M

Note: Cost of Veg and non-veg meal calculated separately and then profit of 20% on overall takings and 25% profit on overall Cost is added to determine the total price to be charged.

(b) **Step 1 :** Let X be the cost of material and Y be the normal rate of wages per hour.

Step 2 : Factory Cost of Workman 'A'

	(Rs.)
A. Material Cost	X
B. Wages	30 Y
C. Bonus = $\frac{30}{50} \times (50 - 30) \times Y$	12 Y
D. Overheads (30 Rs.5)	150
E. Factory Cost	3,490
Or,, X + 42 Y = Rs.3,490 (Given) – Rs.150 = Rs.3,340 ..... equation (i)	

3M

Step 3 : Factory Cost of Workman 'B'

	(Rs.)
A. Material Cost	X
B.Wages	40 Y
C. Bonus = 50% of (SH - AH) × R	5 Y
= 50% of (50 - 40) ×R	
D. Overheads (40 × Rs.5)	200
E. Factory Cost	3,600
Or, X + 45 Y = Rs.3,600 (Given) – Rs.200=Rs.3,400..... equation(ii)	

3M

Step 4 : Subtracting equation (i) from equation (ii) 3Y = Rs.60

Y = Rs. 60/3 = Rs. 20 per hour.

(a) The normal rate of wages: Rs. 20 perhour

(b) The cost of material: X + 45 × Rs.20 =Rs.3,400or,

X=Rs.3,400–Rs.900=Rs.2,500

2M

(c) ComparativeStatementoftheFactoryCostoftheproductmadebythetwo workmen.

	'A'(Rs.)	**'B'**(Rs.)
Material cost	2,500	2,500
Direct Wages	600 (30 ×Rs.20)	800 (40 × Rs. 20)
Bonus	240 (12 × Rs.20)	100 (5 × Rs.20)
Factory Overhead	150	200
Factory Cost	3,490	3,600

2M

Answer: 3

(a) **Workings:**

Monthly Production of X = 30,000 kgs.

Raw Material Required = $\frac{30,000}{3} \times 5$= 50,000 kgs.

Material A = $\frac{50,000}{5} \times 3$= 30,000 kg.

Material B = $\frac{50,000}{5} \times 2 = 20,000$ kg.

(i) Calculation of Economic Order Quantity (EOQ):

Material A = $\sqrt{\frac{2 \times \text{Annual consumption} \times \text{Order cost}}{\text{Carrying cost per unit p.a.}}}$ **1M**

= $\sqrt{\frac{2 \times (30,000\text{kg.} \times 12\text{months}) \times \text{Rs.}120}{(15\% \text{ of Rs.}15)}}$

= $\sqrt{\frac{8,64,00,000}{2.25}}$ = 6,196.77 kg. or 6,197 kg. **1M**

Material B = $\sqrt{\frac{2 \times (20,000 \text{ kg.} \times 12 \text{ months}) \times \text{ Rs.}120}{(5\% \text{ of Rs.}22.44\ ^*)}}$

= $\sqrt{\frac{5,76,00,000}{1.122}}$ = 7,164.97 or 7,165 kg. **1M**

*Purchase price + 2% CST = Rs.22 + 2% of Rs.22 = Rs.22.44

(ii) Calculation of Maximum Stock level: Since, the Material A is perishable in nature and it required to be used within 5 days, hence, the Maximum Stock Level shall be lower of two:

(a) Stock equal to 5 days consumption

= $\frac{30,000\text{kg.}}{25\text{days}} \times 5$ days = 6,000 kg.

(a) Maximum Stock Level for Material A:

Re-order Quantity + Re-order level – (Min consumption* × Min. lead time)

Where, Re-order Quantity = 8,000 kg.

Re-order level = Max. Consumption* × Max. Lead time

= 30,000/25 × 2 days = 2,400 kg. **1M**

Maximum stock Level = 8,000 kg. + 2,400 kg. - (30,000/25 × 1 day)

= 10,400 – 1,200 = 9,200 kg.

Stock required for 5 days consumption is lower than the maximum stock level calculated through the formula. Therefore, Maximum Stock Level will be 6,000 kg. **1M**

(*Since, production is processed evenly throughout the month hence material consumption will also be even.)

(iii) Calculation of Savings/ loss in Material A if purchase quantity equals to EOQ.

	Purchase Quantity = 8,000 kg.	**Purchase Quantity = EOQ i.e. 6,197 kg.**
Annual consumption	3,60,000 kg. (30,000 × 12 months)	3,60,000 kg. (30,000 × 12 months)
No. of orders [Note- (i)]	60 (3,60,000 ÷ 6,000)	60 (3,60,000 ÷ 6,000)
Ordering Cost (a)	Rs.7,200 (Rs.120 × 60)	Rs.7,200 (Rs.120 × 60)
Carrying Cost (b) [Note- (ii)]	Rs.8,100 (15% of Rs.13.50 × 4,000)	Rs.6,972 (15% of Rs.15 × 3,098.5)
Purchase Cost (c) (for good portion)	Rs.48,60,000 (Rs.13.50 × 3,60,000)	Rs.54,00,000 (Rs.15 × 3,60,000)
Loss due to obsolescence (d) [Note- (iii)]	Rs.16,20,000 [Rs.13.5 × (60 × 2,000)]	Rs.1,77,300 [Rs.15 × (60 × 197)]
Total Cost [(a) + (b) + (c) + (d)]	Rs. 64,95,300	Rs. 55,91,472

2M

2M

If purchase quantity equals to EOQ, there will be a saving of Rs. 9,03,828 i.e. Rs. 64,95,300 - Rs. 55,91,472.

Notes: (i) As after 5 days of purchase the Material A gets obsolete, the quantity in excess of 5 days consumption i.e. 6,000 kg. are wasted. Hence,after 6,000 kg.a fresh order needs to be given.
(ii) Carrying cost is incurred on average stock of Materials purchased.
(iii) the excess quantity of material gets obsolete and loss has to be incurred.

1M

Answer: 3

(b) (i) Calculation of Absolute Ton-km for the next month:]

Journey	**Distance in km**	**Weight - Up(in MT)**	**Ton-km**	**Weight-Down (in MT)**	**Ton-km**	**Total**
	(a)	**(b)**	**(c) = (a)×(b)**	**(d)**	**(e)= (a)×(d)**	**(c)+(e)**
Delhi to Kochi	2,700	14	37,800	6	16,200	54,000
Delhi to Guwahati	1,890	12	22,680	0	0	22,680
Delhi to Vijayawada	1,840	15	27,600	0	0	27,600
Delhi to Varanasi	815	10	8,150	0	0	8,150
Delhi to Asansol	1,280	12	15,360	4	5,120	20,480
Delhi to Chennai	2,185	10	21,850	8	17,480	39,330
Total	10,710	73	1,33,440	18	38,800	1,72,240

5M

Total Ton-Km = 1,72,240 ton-km

(ii) Calculation of cost per ton-km:

Particulars	Amount (Rs.)	Amount (Rs.)
A. Running cost:		
- Diesel Cost {Rs.13.75 × (10,710 × 2)}	2,94,525.00	
- Engine Oil Cost $\left(\frac{Rs.4,200}{13,000\,km} \times 21,420\,km\right)$	6,920.31	
- Cost of loading of goods {Rs.150 × (73+18)}	13,650.00	
- Depreciation $\left(\frac{Rs.20,00,000}{7,20,000\,km} \times 21,420\,km\right)$	59,500.00	3,74,595.31
B. Repairs & Maintenance Cost $\left(\frac{Rs.12,000}{10,000\,km} \times 21,420\,km\right)$		25,704
C. Standing Charges		
- Drivers' salary (Rs.18,000 × 4 trucks)	72,000	
- Cleaners' salary (Rs.7,500 × 4 trucks)	30,000	
- Supervision and other general exp.	12,000	1,14,000
Total Cost (A + B + C)		5,14,299.31
Total ton-km		1,72,240
Cost per ton-km		2.99

5M

Answer: 4

(a) (i)

	Rs.
Sales 50,000 units at Rs. 7	3,50,000
Variable cost 50,000 × 3	1,50,000
Contribution 50,000 × 4	2,00,000
Fixed costs	1,20,000
Profit	80,000

1½M

P/V ratio $= \frac{S-V}{S} \times 100 = \frac{7-3}{7} \times 100 = \frac{4}{7} \times 100 = 57.14\%$

BEP (units) $= \frac{F}{\text{contribution per unit}} = \frac{1,20,000}{4} = 30,000$ units.

BEP (Value) = 30,000 Units × 7 = Rs. 2,10,000

Profit Rs. 80,000 (as calculated above)

(ii) with a 10% increase in output & sales i.e., 50,000+ 5,000 = 55,000units

Contribution 55,000 × Rs. 4 per unit	Rs. 2,20,000
Fixed costs	Rs. 1,20,000
Profit	Rs. 1,00,000

1½M

(iii) with a 10% increase in FixedCost

Contribution (50,000 ×Rs. 4 per unit)	Rs. 2,00,000
Fixed cost (1,20,000+ 12,000)	Rs. 1,32,000
Profit	Rs. 68,000

1½M

(iv) with a 10% increase in variablecosts

Selling price per unit	7.00
Less: variable cost (3+0.30)	3.30
Contribution per unit	3.70
Total contribution 50,000 × 3.70	1,85,000
Fixed costs	1,20,000
Profit	65,000

1½M

(v) with a 10% increase in sellingprice

Selling price per unit (7.00+0.70)	7.70
Variable cost per unit	3.00
Contribution per unit	4.70
Total contribution 50,000 × Rs. 4.70	2,35,000
Fixed costs	1,20,000
Profit	1,15,000

1½M

(vi) Effect of all the four above:-

Sales 55,000 × Rs. 7.70 per unit	Rs. 4,23,500
Variable cost 55,000 × 3.30	Rs. 1,81,500
Contribution 55,000 × 4.40	Rs. 2,42,000
Fixed cost 1,20,000+ 12,000	Rs. 1,32,000
Profit	Rs. 1,10,000

2½M

Note: It is assumed that the increased output of 55,000 units has been sold.

Answer (4)

(b) WorkingNotes:-

Standard Costs

	Rs.
Direct materials (6,000 × Rs. 12)	72,000
Direct labour (6,000 × Rs. 4.40)	26,400
Variable overheads (6,000 × Rs. 3)	18,000
Total	1,16,400

1½M

Actual Cost

Direct Materials (12,670 × 5.70)	72,219
Direct wages	27,950
Variable overhead incurred	20,475
Total	1,20,644

1½M

Total Variance = SC- AC = 1,16,400 –1,20,644 = Rs. 4,244 (A)

Missing Figures

1. Actual Direct Labour Hours(DLH)
We can find out this through Variable overhead efficiency variance of Rs. 1,500 adverse VOH Efficiency Variance= SR (SH – AH)

1,500 A	=	3(6,000 – AH)
-1,500	=	18,000 – 3 AH
3AH	=	18,000 + 1,500 = 19,500
AH = 19,500/3	=	6,500 Actual Hours i.e. Actual DLH.

1½M

2. Actual Labour Rate per hour $= \frac{\text{Rs. } 27,950}{6,500 \text{ DLH}}$ = Rs. 4.30

Relevant Variances:

1	Material Variances:	
	(a) MCV = SC – AC = 72,000 – 72,219=	Rs. 219 (A)
	(b) MPV = AQ (SR – AR) = 12,670 (6 – 5.70)=	Rs. 3,801 (F)
	or = 19,000 (6 – 5.70)=	Rs. 5,700(F)
	(c) MUV = SR (SQ – AQ) = 6 (6,000 × 2 –12,670)	
	= 6 (12,000 – 12,670) =	Rs. 4,020 (A)
2.	Labour Variances:	
	(a) LCV = SC – AC = 26,400 – 27,950=	Rs. 1,550 (A)
	(b) LRV = AHP (SR – AR) = 6,500 (4.40 – 4.30)=	Rs. 650 (F)
	(c) LEV = SR (SH – AHP) = 4.40 (6,000 – 6,500)=	Rs. 2,200 (A)
3.	Variable Overhead Variances : (Output Basis)	
	(a) VOH Variance = SVO – AVO= 18,000 –20,475	Rs. 2,475 (A)
	(b) Efficiency Variance = SR (SQ – AQ) (Note1)	
	= 3 (6,500 – 6,000) =	Rs. 1,500 (A)
	(c) Expenditure Variance = (SVOSP – AVO) (Note2)	
	= (19,500 – 20,475) =	Rs. 975 (A)

1½M **1½M** **1½M**

Note :

1. One unit of production in one hour. For 6,500 DLH, 6,500 units should have been produced (SQ).ButAQ=6,000units.i.e.lessthanSQ.Hence,itisadversevarianceofRs.1,500.
2. StandardVariableOverheadonStandardProduction=6,500×3=Rs.19,500

Answer: 6

(a) Just in Time (JIT) Inventory Management

JIT is a system of inventory management with an approach to have a zero inventories in stores. According to this approach material should only be purchased when it is actually required for production.

JIT is based on two principles

(i) Produce goods only when it is required and

(ii) the products should be delivered to customers at the time only when they want.

It is also known as 'Demand pull' or 'Pull through' system of production. In this system, production process actually starts after the order for the products is received. Based on the demand, production process starts and the requirement for raw materials is sent to the purchase department for purchase. This can be understood with the help of the following diagram:

(b) Difference between Bin Card & Stores Ledger

	Bin Card	Stores Ledger
(i)	It is maintained by the storekeeper in the store.	It is maintained in costing department.
(ii)	It contains only quantitative details of material received, issued and returned to stores.	It contains information both in quantity and value.
(iii)	Entries are made when transactions take place.	It is always posted after the transaction.
(iv)	Each transaction is individually posted.	Transactions may be summarized and then posted.
(v)	Inter-department transfers do not appear in Bin Card.	Material transfers from one job to another job are recorded for costing purposes.

(c) M/s. Builder & Co. should follow cost –plus contract to quote price for the contract. Cost-plus contract provide for the payment by the contracteeof the actual cost of manufactureplusastipulatedprofit,mutuallydecidedbetweenthetwoparties.

The main features of these contracts are as follows:

(i) The practice of cost-plus contracts is adopted in the case of those contracts where the probable cost of the contracts can not be ascertained in advance with a reasonableaccuracy.

(ii) These contracts are preferred when the cost of material and labour is not steady and the contract completion may take number ofyears.

(iii) The different cost to be included in the execution of the contract are mutually agreed, so that no dispute may arise in future in this respect. Under such type of contacts, contractee is allowed to check or scrutinize the concerned books, documents andaccounts.

(iv) Such a contract offers a fair price to the contractee and also a reasonable profit to the contractor.

(v) The contract price here is ascertained by adding a fixed and mutually pre-decided component of profit to the total cost of thework.

Since, M/s Builders & Co. is not confident in quoting the price, socost plus contact is better option to safeguard it from unexpectedlosses. **5M**

(d) Molasses is a by productof sugar and treatment of by-product in cost accounting is as follows.

(i) When they are of small total value, the amount realized from their sale may be dealt asfollows:

- Sales value of the by-product may be credited to Profit and Loss Account and no credit be given in Cost Accounting. The credit to Profit and Loss Account here is treated either as a miscellaneous income or as additional salesrevenue.
- The sale proceeds of the by-product may be treated as deduction from the total costs. The sales proceeds should be deducted either from production cost or cost of sales.

(ii) When theyrequire further processing: In this case, the net realisablevalue of the by-product at the split-off point may be arrived at by subtracting the further processing cost from realisable value of by-product. If the value is small, it may be treated as discussed in (i)above. **5M**
