1. HBL Limited produces product 'M' which has a quarterly demand of 20,000 units. Each product requires 3 kg . and 4 kg . of material X and Y respectively. Material X is supplied by a local supplier and can be procured at factory stores at any time, hence, no need to keep inventory for material X . The material Y is not locally available, it requires to be purchased from other states in a specially designed truck container with a capacity of 10 tons.
The cost and other information related with the materials are as follows:

| Particulars | Material-X | Material- $\mathbf{Y}$ |
| :--- | :---: | :---: |
| Purchase price per kg. (excluding GST) | $₹ 140$ | $₹ 640$ |
| Rate of GST | $18 \%$ | $18 \%$ |
| Freight per trip (fixed, irrespective of quantity) | - | $₹ 28,000$ |
| Loss of materials in transit* | - | $2 \%$ |
| Loss in process* | $4 \%$ | $5 \%$ |

*On purchased quantity
Other information:

- The company has to pay $15 \%$ p.a. to bank for cash credit facility.
- Input credit is available on GST paid on materials.

## Required:

(i) CALCULATE cost per kg. of material $X$ and $Y$
(ii) CALCULATE the Economic Order quantity for both the materials.

## Employee (Labour) Cost

2. ADV Pvt. Ltd. manufactures a product which requires skill and precision in work to get quality products. The company has been experiencing high labour cost due to slow speed of work. The management of the company wants to reduce the labour cost but without compromising with the quality of work. It wants to introduce a bonus scheme but is indifferent between the Halsey and Rowan scheme of bonus.
For the month of November 2019, the company budgeted for 24,960 hours of work. The workers are paid ₹ 80 per hour.

Required:
(i) CALCULATE and suggest the bonus scheme where the time taken (in \%) to time allowed to complete the works is (a) $100 \%$ (b) $75 \%$ (c) $50 \%$ \& (d) $25 \%$ of budgeted hours.

## Overheads-Absorption Costing Method

3. PLR Ltd. manufacturers a single productand recovers the overheads by adopting a single blanket rate based on machine hours. The budgeted production overheads of the factory for the FY 2019-20 are ₹50,40,000 and budgeted machinehours are 6,000.
For a period of first six months of the financial year 2019-20, following information were extracted from the books:

Actual production overheads ₹34,08,000
Amount included in the production overheads:

| Paid as per court's order | $₹ 4,50,000$ |
| :--- | ---: |
| Expenses of previous year booked in current year | $₹ 1,00,000$ |
| Paid to workers for strike period under an award | $₹ 4,20,000$ |

Production and sales data of the concern for the first six months are as under:
Production:
Finished goods 1,10,000 units
Works-in-progress
( $50 \%$ complete in every respect) $\quad 80,000$ units
Sale:
Finished goods
90,000 units
The actual machine hours worked during the period were 3,000 hours. It is revealed from the analysis of information that $40 \%$ of the over/under-absorption was due to defective production policies and the balance was attributable to increase in costs.
You are required:
(i) to determine the amount of over/ under absorption of production overheads for the period,
(ii) to show the accounting treatment of over/ under-absorption of production overheads, and
(iii) to apportion the over/ under-absorbed overheads over the items.

## SUGGESTED HINTS/ANSWERS

## 1. Working Notes:

(a) Annual purchase quantity for material X and Y :

Annual demand for product M-20,000 units $\times 4=80,000$ units

| Particulars | Mat-X | Mat- $\mathbf{Y}$ |
| :--- | ---: | ---: |
| Quantity required for per unit of product M | 3 kg. | 4 kg. |
| Net quantity for materials required | $2,40,000 \mathrm{~kg}$. | $3,20,000 \mathrm{~kg}$. |
| Add: Loss in transit | - | $6,881 \mathrm{~kg}$. |
| Add: Loss in process | $10,000 \mathrm{~kg}$. | $17,204 \mathrm{~kg}$. |

Purchase quantity

| $2,50,000 \mathrm{~kg}$. | $3,44,085 \mathrm{~kg}$. |
| :--- | :--- |

Note - Input credit on GST paid is available; hence, it will not be included in cost of material.
(i) Calculation of cost per kg. of material X and Y :

| Particulars | Mat-X | Mat- $\mathbf{Y}$ |
| :--- | ---: | ---: |
| Purchase quantity | $2,50,000 \mathrm{~kg}$. | $3,44,085 \mathrm{~kg}$. |
| Rate per kg. | $₹ 140$ | $₹ 640$ |
| Purchase price | $₹ 3,50,00,000$ | $₹ 22,02,14,400$ |
| Add: Freight | 0 | $₹ 9,80,000^{*}$ |
| Total cost | $₹ 3,50,00,000$ | $₹ 22,11,94,400$ |
| Net Quantity | $2,40,000 \mathrm{~kg}$. | $3,20,000 \mathrm{~kg}$ |
| Cost per kg. | $₹ 145.83$ | $₹ 691.23$ |

*No. of trucks $=\frac{3,44,085 \mathrm{~kg} .}{10 \text { ton } \times 1,000}=34.40$ trucks or 35 trucks
Therefore, total freight $=35$ trucks $\times ₹ 28,000=₹ 9,80,000$
(ii) Calculation of Economic Order Quantity (EOQ) for Mat.-X and Y:
$\mathrm{EOQ}=\sqrt{\frac{2 \times \text { Annual Requirement } \times \text { Order } \cos t}{\text { Carryingcost per unitp.a. }}}$

| Particulars | Mat-X | Mat- $\boldsymbol{Y}$ |
| :--- | ---: | ---: |
| Annual Requirement | $2,50,000 \mathrm{~kg}$. | $3,44,085 \mathrm{~kg}$. |
| Ordering cost | 0 | $₹ 28,000$ |
| Cost per unit | $₹ 145.83$ | $₹ 691.23$ |
| Carrying cost | $15 \%$ | $15 \%$ |
| Carrying cost per unit p.a. | $0^{*}$ | $₹ 103.68$ |
| EOQ | 0 | $13,632.62 \mathrm{~kg}$. |

2. The Cost of labour under the bonus schemes are tabulated as below:

| Time Allowed | Time taken | Wages (₹) | Bonus (₹) |  | Total Wages (₹) |  | Earning per hour (₹) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Halsey* | Rowan** | Halsey | Rowan | Halsey | Rowan |
| (1) | (2) | $\begin{gathered} (3) \\ =(2) \times ₹ 80 \end{gathered}$ | (4) | (5) | $\begin{gathered} (6) \\ =(3)+(4) \end{gathered}$ | $\begin{gathered} (7) \\ =(3)+(5) \end{gathered}$ | $\begin{gathered} (8) \\ =(6) /(2) \end{gathered}$ | $\begin{gathered} (9) \\ =(7) /(2) \end{gathered}$ |
| 24,960 | 24,960 | 19,96,800 |  |  | 19,96,800 | 19,96,800 | 80.00 | 80.00 |
| 24,960 | 18,720 | 14,97,600 | 2,49,600 | 3,74,400 | 17,47,200 | 18,72,000 | 93.33 | 100.00 |

| 24,960 | 12,480 | $9,98,400$ | $4,99,200$ | $4,99,200$ | $14,97,600$ | $14,97,600$ | 120.00 | 120.00 |
| ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 24,960 | 6,240 | $4,99,200$ | $7,48,800$ | $3,74,400$ | $12,48,000$ | $8,73,600$ | 200.00 | 140.00 |

* Bonus under Halsey Plan $=50 \%$ of (Time Allowed - Time Taken) $\times$ Rate per hour
** Bonus under Rowan Plan $=\frac{\text { Time taken }}{\text { Time allowed }} \times$ Time saved $\times$ Rate per hour
Rowan scheme of bonus keeps checks on speed of work as the rate of incentive increases only upto $50 \%$ of time taken to time allowed but the rate decreases as the time taken to time allowed comes below $50 \%$. It provides incentives for efficient workers for saving in time but also puts check on careless speed. On implementation of Rowan scheme, the management of ADV Pvt. Ltd. would resolve issue of the slow speed work while maintaining the skill and precision required maintaining the quality of product.

3. (i) Amount of over/ under absorption of production overheads during the period of first six months of the year 2019-20:

|  | Amount <br> $(₹)$ | Amount <br> $(₹)$ |

*Budgeted Machine hour rate (Blanket rate) $=\frac{₹ 50,40,000}{6,000 \text { hours }}=₹ 840$ per hour
(ii) Accounting treatment of over absorbed production overheads: As, $40 \%$ of the over absorbed overheads were due to defective production policies, this being abnormal, hence should be credited to Costing Profit and Loss Account.
Amount to be credited to Costing Profit and Loss Account
$=₹ 1,18,000 \times 40 \%=₹ 47,200$.

Balance of over absorbed production overheads should be distributed over Works in progress, Finished goods and Cost of sales by applying supplementary rate*.
Amount to be distributed $=₹ 1,18,000 \times 60 \%=₹ 70,800$
Supplementary rate $=\frac{₹ 70,800}{1,50,000 \text { units }}=₹ 0.472$ per unit
(iii) Apportionment of over absorbed production overheads over WIP, Finished goods and Cost of sales:

|  | Equivalent <br> completed units | Amount <br> $(₹)$ |
| :--- | ---: | ---: |
| Work-in-Progress $(80,000$ units $\times 50 \% \times 0.472)$ | 40,000 | 18,880 |
| Finished goods $(20,000$ units $\times 0.472)$ | 20,000 | 9,440 |

Fixed Cost $=₹ 5 \times 50,000$ units $=₹ 2,50,000$
Variable Cost Per unit = ₹ $25-₹ 5=₹ 20$
**Distribution Expenses: Fixed cost per unit $=₹ 20 \times 15 \%=₹ 3$
Fixed Cost $=₹ 3 \times 50,000$ units $=₹ 1,50,000$

Variable cost per unit $=$ ₹ $20-₹ 3=₹ 17$
15. (i) Difference between Cost Accounting and Management Accounting

|  | Basis | Cost Accounting | ManagementAccounting |
| :--- | :--- | :--- | :--- |
| (i) | Nature | It records the quantitative <br> aspect only. | It records both qualitative <br> and quantitative aspect. |
| (ii) | Objective | It records the cost of <br> producing a product and <br> providing a service. | It Provides information to <br> management for planning <br> and co-ordination. |
| (iii) | Area | It only deals with cost <br> Ascertainment. | It is wider in scope as it <br> includes financial <br> accounting, budgeting, <br> taxation, planning etc. |
| (iv) | Recording of <br> data | It uses both past and <br> present figures. | It is focused with the <br> projection of figures for <br> future. |
| (v) | Development | Its development is related <br> to industrial revolution. | It develops in accordance <br> to the need of modern <br> business world. |
| (vi) | Rules and <br> Regulation | It follows certain principles <br> and procedures for <br> recording costs of different <br> products. | It does not follow any <br> specific rules and <br> regulations. |

(ii) Budget Manual: A budget manual is a collection of documents that contains key information for those involved in the planning process. Typical contents could include the following:

- An introductory explanation of the budgetary planning and control process, including a statement of the budgetary objective and desired results.
- A form of organisation chart to show who is responsible for the preparation of each functional budget and the way in which the budgets are interrelated.
- A timetable for the preparation of each budget. This will prevent the formation of a 'bottleneck' with the late preparation of one budget holding up the preparation of all others.
- Copies of all forms to be completed by those responsible for preparing budgets, with explanations concerning their completion.
- A list of the organization's account codes, with full explanations of how to use them.
- Information concerning key assumptions to be made by managers in their budgets, for example the rate of inflation, key exchange rates, etc.
(iii) Equivalent Units: Equivalent units or equivalent production units, means converting the incomplete production units into their equivalent completed units. Under each process, an estimate is made of the percentage completion of work-in-process with regard to different elements of costs, viz., material, labour and overheads. It is important that the estimate of percentage of completion should be as accurate as possible. The formula for computing equivalent completed units is:
Equivalent completed units = $\left.\begin{array}{c}\text { Actual number of unitsin } \\ \text { the process of manufacture }\end{array}\right) \times\binom{$ Percentage of }{ Work completed }
For instance, if $25 \%$ of work has been done on the average of units still under process, then 200 such units will be equal to 50 completed units and the cost of work-inprocess will be equal to the cost of 50 finished units.
