* (₹ $2,16,000 \div 20,000 \mathrm{~km}$.) $=$ ₹ 10.80
\#[(₹ 7,20,000 - ₹ 96,000$) \div 5$ years] $\div 20,000 \mathrm{~km}$. $=$ ₹ 6.24
The Second alternative i.e., use of own car by the executive and reimbursement of expenses by the company is the best alternative from company's point of view.

## Working Notes:

1. Calculation of Units produced:

Main Product X 60\% of Raw Materials 600 Units
By-Product Y $15 \%$ of Raw Materials 150 Units
By Product Z 20\% of Raw Materials 200 Units
Wastage $5 \%$ of Raw Materials 50 Units
1000 Units
2. Cost Allocation

## Raw Materials

Let Product $Z$ requires 1 unit of raw materials then, Product $Y$ will require 2 units of raw materials and Product $X$ will require 3 units of raw materials.

| Product | X |  | Y |  | Z |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Individual Unit ratio (a) | 3 | $:$ | 2 | $:$ | 1 |
| Units (b) | 600 |  | 150 |  | 200 |
| Ratio for Cost Allocation (a*b) | 1800 | $:$ | 300 | $:$ | 200 |
| Ratio | 18 | $:$ | 3 | $:$ | 2 |

Labour:
Let Product $Z$ requires 1 hour of Labour then, Product $Y$ will require 2 hours of Labour and Product $X$ will require 6 hours of Labour.

| Product | X |  | Y |  | Z |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Individual hour ratio (a) | 6 | $:$ | 2 | $:$ | 1 |
| Units (b) | 600 |  | 150 |  | 200 |
| Ratio for Cost Allocation (a*b) | 3600 | $:$ | 300 | $:$ | 200 |
| Ratio | 36 | $:$ | 3 | $:$ | 2 |

(c) Workings:
(i) Percentage of work certified:
$\frac{\text { Value of work certified }}{\text { Contract price }} \times 100=\frac{₹ 5,80,000}{₹ 14,50,000} \times 100=40 \%$
(ii) Value of material and labour used in the contract:

| Particulars | Amount (₹) | Amount (₹) |
| :--- | ---: | ---: |
| Material purchased | $2,90,000$ |  |
| Less: Material on hand (30-06-2022) | $(72,500)$ | $2,17,500$ |
| Wages paid | $1,30,500$ |  |
| Add: Wages accrued (30-06-2022) | 14,500 | $1,45,000$ |
|  |  | $3,62,500$ |

Price of materials and wages has been increased by $25 \%$, the value before price increase is:
$\frac{₹ 3,62,500}{125} \times 100=₹ 2,90,000$
(iii) Calculation of Value of work certified:

The value of the contract would be increased by $25 \%$ of the price increased beyond $5 \%$.
Price increased beyond $5 \%=₹(3,62,500-2,90,000)-5 \%$ of $₹ 2,90,000$

$$
=₹ 72,500-₹ 14,500=₹ 58,000
$$

Value of contract would be increased by $25 \%$ of $₹ 58,000=₹ 14,500$
Therefore, the revised contract value $=₹ 14,50,000+₹ 14,500=₹ 14,64,500$
Calculation of the Value of work certified after taking the effect of escalation clause:
$=$ Revised contract value $\times$ Percentage of work certified
$=₹ 14,64,500 \times 40 \%=₹ 5,85,800$
(d) (i) Monthly production of $\mathrm{AB}=50,000 \mathrm{kgs}$

Raw material required $=50,000 / 5 \times 8=80,000 \mathrm{kgs}$
Material Ae and Material Be ratio $=5: 3$
Therefore, material $\mathrm{Ae}=80,000 / 8 \times 5=50,000 \mathrm{kgs}$
$\begin{aligned} \text { Calculation of EOQ } & =\sqrt{\frac{2 \times(\text { Annual demand } \mathrm{x} \text { cost per order) }}{\text { Annual holding cost per unit }}} \\ \text { EOQ } & =\sqrt{\frac{2 \times 50,000 \mathrm{kgs} \times 12 \times 375}{12 \% \text { of } ₹ 150}}=5,000 \mathrm{kgs}\end{aligned}$
(ii) Calculation of maximum stock level of Material Ae which is perishable in nature and is required to be used within 3.5 days.
(a) Stock equals to 3.5 days consumption $=50,000 \mathrm{kgs} / 25$ days $\times 3.5$ days $=7,000 \mathrm{kgs}$
(b) Maximum stock level for Material Ae

Maximum stock $=$ Reorder quantity + reorder level - (minimum consumption x minimum lead time)

Where, reorder quantity $=7,500 \mathrm{kgs}$
Reorder level = maximum consumption* x maximum lead time
$=50,000 / 25 \times 3$ days $=6,000 \mathrm{kgs}$
Now, Maximum stock level $=7,500 \mathrm{kgs}+6,000 \mathrm{kgs}-(50,000 / 25$ days $\times 2$ days $)=9,500$ kgs
Stock required for 3.5 days consumption is lower than the maximum stock level calculated above. Therefore, maximum stock level will be $7,000 \mathrm{kgs}$.
(*since production is processed evenly throughout the month hence material consumption will also be even.)
2. (a) (i) Material Cost Variance $=$ Material Price Variance + Material Usage Variance $=₹ 8,775 \mathrm{~A}+₹ 5,625 \mathrm{~F}=₹ 3,150$ Adverse
(ii) Actual output units

Let $x$ be the actual quantity of output
Then Standard Quantity of input for actual output ' $x$ '
$S Q=10 x$

| Material cost variance | $=(S Q \times S P)-(A Q \times A P)$ |
| ---: | :--- |
| $-3,150$ | $=(10 x x ₹ 22.50)-₹ 96,525$ |
| $-3,150$ | $=225 x-₹ 96,525$ |
| $225 x$ | $=₹ 96,525-3,150=₹ 93,375$ |
| $x$ | $=₹ 93,375 / 225=415$ Units |

(iii) Actual Price of Material per unit

| Material Usage variance | $=(S Q-A Q) \times S P$ |
| ---: | :--- |
| 5,625 | $=(10 \times-A Q) \times ₹ 22.50$ |
| 5,625 | $=(10 \times 415$ units $-A Q) \times ₹ 22.50$ |
| $5,625 / 22.50$ | $=4,150-A Q$ |
| AQ | $=4,150-250=3,900$ units |
| Now, AQ $\times$ AP | $=₹ 96,525$ (given) |
| AP | $=₹ 96,525 / A Q$ |
|  | $=₹ 96,525 / 3,900$ units $=₹ 24.75$ |

(iv) Actual wages rate per labour hour

Labour efficiency variance $=5,400$ Adverse (given)
Standard rate per hour (Standard time - Actual time) $=-5,400$
$₹ 120$ [(Actual output units $x$ Number of hours per output) - Actual time] $=-5,400$
$₹ 120$ [(415 units $\times 5$ hrs) - Actual time] $=-5,400$

| $\quad 2,075$ hrs - Actual time | $=-5,400 / 120$ |
| :--- | :--- |
| Actual time | $=2,075+45$ |
|  | $=2,120 \mathrm{hrs}$ |
| Now Direct wages | $=₹ 2,44,860$ (given) |
| Actual time $x$ Actual rate per hour | $=₹ 2,44,860$ |
| Actual rate per hour | $=₹ 2,44,860 / 2,120$ hrs |

= ₹ 115.50
(v) Labour rate variance
$=$ Actual time (Standard Rate - Actual Rate)
$=2,120$ hrs ( $₹ 120-₹ 115.50$ )
$=2,120$ hrs x ₹ $4.50=9,540$ Favourable
(vi) Labour Cost variance
$=$ Labour rate variance + Labour efficiency variance
$=9,540 \mathrm{~F}+5,400 \mathrm{~A}=4,140$ Favourable
(b) Calculation of Semi Variable component

|  | Repairs and Maintenance (₹) | Indirect labour (₹) |
| :--- | :---: | :---: |
| At 75\% capacity | $18,00,000$ | $36,00,000$ |
| At 100\% capacity | $21,00,000$ | $42,00,000$ |
| Variable component for $25 \%$ | $3,00,000$ | $6,00,000$ |
| Hence variable cost at $75 \%$ | $3,00,000 \times 75 / 25=9,00,000$ | $6,00,000 \times 75 / 25=$ |
|  |  | $\mathbf{1 8 , 0 0 , 0 0 0}$ |
| Fixed cost at 75\% capacity | $18,00,000-9,00,000=9, \mathbf{0 0 , 0 0 0}$ | $36,00,000-$ |
|  | $18,00,000=\mathbf{1 8 , 0 0 , 0 0 0}$ |  |

(i) Calculation of profit earned at 75\% capacity

Given PV ratio $=40 \%$, Hence variable cost would be $60 \%$
If variable cost is ₹ 360 lakhs then sales would be $360 / 0.60=₹ 600$ lakhs
Less: Variable cost = ₹ 360 lakhs
Less: Fixed cost $\quad$ ₹ 140 lakhs
Profit = ₹ 100 lakhs
(ii) Break-even level of activity

BEP Sales $=F C /$ P/V ratio $=140 / 0.40=₹ 350$ lakhs
3. (a) (i) Process I Statement of Equivalent Production (Under Weighted Average Method)

| Particulars | Input units (in Liter) | Particulars | Output units (in Liter) | Equivalent Production |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Material |  | Conversion |  |

|  |  | Closing WIP | 15,000 | 100 | 15,000 | 80 | 12,000 |
|  |  | Abnormal Loss (Bal. fig.) | 8,000 | 100 | 8,000 | 100 | 8,000 |
|  | 72,000 |  | 72,000 |  | 63,000 |  | 60,000 |

Statement of Cost for Each Element

| Elements of Costs | Material (₹) | Conversion Cost (₹) |
| :--- | ---: | ---: |
| Costs of Opening WIP | $1,75,000$ | $1,40,000$ |
| Cost of the Process (for the period) | $7,70,000$ | $8,35,000$ |
| Total Cost | $\mathbf{9 , 4 5 , 0 0 0}$ | $\mathbf{9 , 7 5 , 0 0 0}$ |
| Equivalent Units (in liter) | 63,000 | 60,000 |
| Cost Per equivalent Units (in liter) | $₹ 15$ | $₹ 16.25$ |

Therefore, Cost of Medicine ' $X$ ' is $₹ 31.25$ per liter ( $₹ 15+₹ 16.25$ )
(ii) Statement showing comparative data to decide whether 30,000 Liters of Medicine ' X ' should be further processed into 'XYZ'

|  | Alternative 1 | Alternative 2 |
| :--- | :---: | :---: |
|  | Sell medicine 'X' after <br> Process I <br> (₹) | Process further into <br> 'XYZ' <br> (₹) |
|  | $12,75,000$ <br> $(30,000$ liters $\mathbf{x}$ ₹ 42.50) | $18,75,000$ <br> $(37,500$ liters x ₹ 50) |
|  |  |  |
| (30,000 liters x ₹ 31.25) | $9,37,500$ | $9,37,500$ |
| Material in Process II | - | $2,75,000$ |
| Conversion cost in Process II | - | $2,50,000$ |
| Total Cost | $9,37,500$ | $14,62,500$ |
| Profit | $3,37,500$ | $4,12,500$ |

Hence, company should process further as it will increase profit further by $₹ 75,000$ (₹ $4,12,500$ - ₹ $3,37,500$ )

Profit as a \% of sales $=\frac{13 \text { Lakhs }}{50 \text { Lakhs }} \times 100=26 \%$

## Working Notes:

(i) The cost sheet is completed by Reverse Working. Purchases amount is the balancing figure.
(ii) Direct labour $=175 \%$ of factory overhead (given). Hence, if direct labour $=10,50,000$, then Factory Overhead $=10,50,000 / 175 \%=₹ 6,00,000$
(iii) Selling Overhead ₹ $2,50,000$ (total), selling per unit ₹ 500 .

Number of units sold $=₹ 2,50,000$ ₹ $₹ 500=500$ units
(iv) Cost of goods sold = 500 units $x ₹ 6,900=₹ 34,50,000$

(b) Workings -

1. Fixed Production overheads (given) $=₹ \mathbf{2 5}$ per unit

So, at 1,00,000 units capacity, it will be ₹ $25,00,000$ (1,00,000 units x ₹ 25 )
2. Selling and distribution overheads:

Given (1,00,000 units x ₹ 25 ) = ₹ $25,00,000$
So, Fixed component
$=₹ 25,00,000 \times 20 \%=₹ 5,00,000$
Hence, variable component
$=₹ 25,00,000-₹ 5,00,000=₹ 20,00,000$
Variable per unit
= ₹ $20,00,000 / 1,00,000$ units
= ₹ 20 per unit

(v) Income tax, donations, subscriptions
(vi) Expenses of the company's share transfer office, if any.
(c) Unit costing: It is that method of costing where the output produced is identical and each unit of output requires identical cost. Unit costing is synonymously known as single or output costing, but these are sub-division of unit costing method.

This method of costing is followed by industries which produce single output or few variants of a single output, therefore, this method of costing, finds its application in industries like paper, cement, steel works, mining, breweries etc. These types of industries produce identical products and therefore have identical costs.
