### Budget and Budgetary Control

13. XY Co. Ltd manufactures two products viz., X and Y and sells them through two divisions, East and West. For the purpose of Sales Budget to the Budget Committee, following information has been made available for the year 2022-23:

Product	Budgeted Sales		Actual Sales	
	East Division	West Division	East Division	West Division
X	400 units at ₹ 9	600 units at ₹ 9	500 units at ₹ 9	700 units at ₹ 9
Y	300 units at ₹ 21	500 units at ₹ 21	200 units at ₹ 21	400 units at ₹ 21

Adequate market studies reveal that product X is popular but underpriced. It is expected that if the price of X is increased by ₹ 1, it will, find a ready market. On the other hand, Y is overpriced and if the price of Y is reduced by ₹ 1 it will have more demand in the market. The company management has agreed for the aforesaid price changes. On the basis of these price changes and the reports of salesmen, following estimates have been prepared by the Divisional Managers:

Percentage increase in sales over budgeted sales

Product	East Division	West Division
X	+ 10%	+ 5%
Y	+ 20%	+ 10%

With the help of intensive advertisement campaign, following additional sales (over and above the above-mentioned estimated sales by Divisional Managers) are possible:

Product	East Division	West Division
X	60 units	70 units
Y	40 units	50 units

You are required to prepare Sales Budget for 2023-24 after incorporating above estimates and also show the Budgeted Sales and Actual Sales of 2022-23.

**SUGGESTED HINTS/ANSWERS**

1. Difference between Minimum lead time Maximum lead time = 4 days  
 Max. lead time – Min. lead time = 4 days  
 Or, Max. lead time = Min. lead time + 4 days.....(i)  
 Average lead time is given as 6 days i.e.  

$$\frac{\text{Max.lead time} + \text{Min.lead time}}{2} = 6 \text{ days}..... (ii)$$
 Putting the value of (i) in (ii),  

$$\frac{\text{Min. lead time} + 4 \text{ days} + \text{Min.lead time}}{2} = 6 \text{ days}$$
 Or, Min. lead time + 4 days + Min. lead time = 12 days  
 Or, 2 Min. lead time = 8 days

$$\text{Or, Minimum lead time} = \frac{8 \text{ days}}{2} = 4 \text{ days}$$

Putting this Minimum lead time value in (i), we get

$$\text{Maximum lead time} = 4 \text{ days} + 4 \text{ days} = 8 \text{ days}$$

(i) **Maximum consumption per day:**

$$\text{Re-order level} = \text{Max. Re-order period} \times \text{Maximum Consumption per day}$$

$$1,60,000 \text{ units} = 8 \text{ days} \times \text{Maximum Consumption per day}$$

$$\text{Or, Maximum Consumption per day} = \frac{1,60,000 \text{ units}}{8 \text{ days}} = 20,000 \text{ units}$$

(ii) **Minimum Consumption per day:**

$$\text{Maximum Stock Level} =$$

$$\text{Re-order level} + \text{Re-order Quantity} - (\text{Min. lead time} \times \text{Min. Consumption per day})$$

$$\text{Or, } 1,90,000 \text{ units} = 1,60,000 \text{ units} + 90,000 \text{ units} - (4 \text{ days} \times \text{Min. Consumption per day})$$

$$\text{Or, } 4 \text{ days} \times \text{Min. Consumption per day} = 2,50,000 \text{ units} - 1,90,000 \text{ units}$$

$$\text{Or, Minimum Consumption per day} = \frac{60,000 \text{ units}}{4 \text{ days}} = 15,000 \text{ units}$$

2. (i) **Effective hourly rate of earnings under Rowan Incentive Plan**

$$\text{Earnings under Rowan Incentive plan} =$$

$$(\text{Actual time taken} \times \text{wage rate}) + \frac{\text{Time Saved}}{\text{Time Allowed}} \times \text{Time taken} \times \text{Wage rate}$$

$$= (5 \text{ hours} \times ₹ 120) + \left( \frac{1 \text{ hour}}{6 \text{ hours}} \times 5 \text{ hours} \times ₹ 120 \right)$$

$$= ₹ 600 + ₹ 100 = ₹ 700$$

$$\text{Effective hourly rate} = ₹ 700 / 5 \text{ hours} = ₹ 140 / \text{hour}$$

(ii) Let time taken = X

$$\therefore \text{Effective hourly rate} = \frac{\text{Earnings under Halsey Scheme}}{\text{Time Taken}}$$

$$\text{Or, Effective hourly rate under Halsey Incentive plan} =$$

$$\frac{(\text{Time taken} \times \text{Rate}) + 50\% \text{ of Rate} \times (\text{Time allowed} - \text{Time taken})}{\text{Time Taken}}$$

$$\text{Or, } ₹140 = \frac{(X \times ₹120) + 50\% \text{ of } ₹120 \times (6 - X)}{X}$$

$$\text{Or, } 140X = 120X + 360 - 60X$$

$$\text{Or, } 80X = 360$$

$$\text{Or, } X = \frac{360}{80} = 4.5 \text{ hours}$$

Therefore, to earn effective hourly rate of ₹140 under Halsey Incentive Scheme worker has to complete the work in 4.5 hours.

### 3. Working Notes:

- (i) Total Productive hours = Estimated Working hours – Machine Maintenance hours  
= 2,200 hours – 200 hours = 2,000 hours
- (ii) Depreciation per annum =  $\frac{10,00,000 - 10,000}{10} = ₹ 99,000$
- (iii) Chemical solution cost per annum = ₹ 2,000 × 50 weeks = ₹ 1,00,000
- (iv) Wages of attendants (per annum) =  $\frac{9,000 \times 50 \text{ weeks}}{6 \text{ machines}} = ₹ 75,000$

Cost of production of 12,405 units (Refer to working note 1)	43,28,140
Cost of production per unit:	
$= \frac{\text{Total Cost of Production}}{\text{No. of units produced}} = \frac{\text{₹}43,28,140}{12,405 \text{ units}} = \text{₹}348.90$	

7. (i) **Calculation of Overhead Recovery Rate:**

$$\text{Factory Overhead Recovery Rate} = \frac{\text{₹} 30,80,000}{\text{₹} 90,50,000} \times 100 = 34\% \text{ of Direct labour}$$

$$\text{Administrative Overhead Recovery Rate} = \frac{\text{₹} 20,50,400}{\text{₹} 2,96,80,000} \times 100 = 6.91\% \text{ of Factory Cost}$$

**Working Note: Calculation of Factory Cost in 2022-23**

**Computation of profit:**

Let ₹ x be the rent for deluxe from.

Equivalent deluxe room days are 90,720 (Refer WN-2)

Total takings = ₹ 90,720x

Profit is 25% of total takings.

Profit = 25% of ₹ 90,720x = ₹ 22,680x

Total takings = Total Cost + Profit

$$₹ 90,720x = ₹ 16,66,98,000 + ₹ 22,680x$$

$$₹ 90,720x - ₹ 22,680x = ₹ 16,66,98,000$$

$$₹ 68,040x = ₹ 16,66,98,000$$

$$X = \frac{₹ 16,66,98,000}{₹ 68,040} = ₹ 2,450$$

Rent to be charged for deluxe room	₹ 2,450
Rent to be charged for super deluxe room = Rent of deluxe room x 2 = ₹ 2,450 x 2	₹ 4,900
Rent to be charged for luxury suite = Rent of Deluxe room x 3 = ₹ 2,450 x 3	₹ 7,350

Deluxe Room	100 rooms x 360 days x 90% occupancy	32,400
Super Deluxe Room	60 rooms x 360 days x 75% occupancy	16,200
Luxury Suite	40 x 360 days x 60% occupancy	8,640
	Total	57,240

##### 2. Computation of equivalent deluxe room days

Rent of 'super deluxe' room is to be fixed at 2 times of 'deluxe room' and luxury suite' is 3 times of 'deluxe room'. Therefore, equivalent room days would be:

Type of Room	Room days	Equivalent deluxe room days
Deluxe Room	32,400 x 1	32,400
Super Deluxe Room	16,200 x 2	32,400
Luxury Suite	8,640 x 3	25,920
	Total	90,720

##### 3. Computation of room attendant's wages:

Room occupancy days @ ₹ 500 per day

$$= 57,240 \text{ days} \times ₹ 500 \text{ per day} = ₹ 2,86,20,000$$

## 4. Computation of Depreciation per annum:

$$\begin{aligned} \text{(i) Labour rate Variance} &= \text{AH (SR - AR)} \\ &\text{Or } 17,094 (8 - \text{AR}) = 68,376(\text{A}) \\ &\text{Or } 17,094 (8 - \text{AR}) = - 68,376 \\ &\text{Or } 8 - \text{AR} = -4 \\ &\text{Or } \text{AR} = ₹12 \end{aligned}$$

$$\begin{aligned} \text{(ii) Labour Efficiency} &= \frac{\text{SH}}{\text{AH}} \times 100 = 105.3 \\ &= \text{SH} = \frac{\text{AH} \times 105.3}{100} = \frac{17,094 \times 105.3}{100} \\ &= 17,999.982 \\ &= \text{SH} = 18,000 \text{ hours} \end{aligned}$$

$$\begin{aligned} \text{(iii) Labour Efficiency Variance} &= \text{SR (SH - AH)} \\ &= 8(18,000 - 17,094) \\ &= 8 \times 906 \\ &= ₹ 7,248(\text{F}) \end{aligned}$$

$$\text{(iv) Standard Labour Cost per Unit} = \frac{18,000 \times 8}{6,000} = ₹ 24$$

14. (a) **Cost plus contract:** Under cost plus contract, the contract price is ascertained by adding a percentage of profit to the total cost of the work. Such types of contracts are entered into when it is not possible to estimate the contract cost with reasonable accuracy due to unstable condition of material, labour services etc.

Following are the advantages of cost-plus contract:

- (i) The contractor is assured of a fixed percentage of profit. There is no risk of incurring any loss on the contract.
- (ii) It is useful specially when the work to be done is not definitely fixed at the time of making the estimate.
- (iii) Contractee can ensure himself about the 'cost of contract' as he is empowered to examine the books and documents of the contractor to ascertain the veracity of the cost of contract.

- (b) The main objectives of introduction of a Cost Accounting System in a manufacturing organization are as follows:

- (i) **Ascertainment of cost:** The main objective of a Cost Accounting system is to ascertain cost for cost objects. Costing may be post completion or continuous but the aim is to arrive at a complete and accurate cost figure to assist the users to compare, control and make various decisions.
- (ii) **Determination of selling price:** Cost Accounting System in a manufacturing organisation enables to determine desired selling price after adding expected profit margin with the cost of the goods manufactured.
- (iii) **Cost control and Cost reduction:** Cost Accounting System equips the cost controller to adhere and control the cost estimate or cost budget and assist them to identify the areas of cost reduction.
- (iv) **Ascertainment of profit of each activity:** Cost Accounting System helps to classify cost on the basis of activity to ascertain activity wise profitability.
- (v) **Assisting in managerial decision making:** Cost Accounting System provides relevant cost information and assists managers to make various decisions.

- (c) Idle capacity costs are treated in the following ways in Cost Accounts:
- (i) **If the idle capacity cost is due to unavoidable reasons:** A supplementary overhead rate may be used to recover the idle capacity cost. In this case, the costs are charged to the production capacity utilised.
  - (ii) **If the idle capacity cost is due to avoidable reasons:** Such as faulty planning, etc. the cost should be charged to Costing Profit and Loss Account.
  - (iii) **If the idle capacity cost is due to trade depression, etc.:** Being abnormal in nature the cost should also be charged to the Costing Profit and Loss Account.
  - (iv) **If the idle capacity cost is due to seasonal factors,** then the cost should be charged to cost of production by inflating overhead rate.
- (d) Treatment of over and under absorption of overheads are:
- (i) Writing off to costing P&L A/c: Small difference between the actual and absorbed amount should simply be transferred to costing P&L A/c, if difference is large then investigate the causes and after that abnormal loss/ gain shall be transferred to costing P&L A/c.
  - (ii) Use of supplementary Rate: Under this method the balance of under and over absorbed overheads may be charged to cost of W.I.P., finished stock and cost of sales proportionately with the help of supplementary rate of overhead.
  - (iii) Carry Forward to Subsequent Year: Difference should be carried forward in the expectation that next year the position will be automatically corrected.
- (e) Distinguish between Cost allocation and Cost absorption:
- Cost allocation* is the allotment of whole item of cost to a cost centre or a cost unit. In other words, it is the process of identifying, assigning or allowing cost to a cost centre or a cost unit.
- Cost absorption* is the process of absorbing all indirect costs or overhead costs allocated or apportioned over particular cost center or production department by the units produced.
